Principles of FEA The finite element method (FEM), or finite element analysis (FEA), is a computational technique used to obtain approximate solutions of boundary value problems in engineering. Boundary value problems are also called field problems. The field

In mathematics, a finite field or Galois field (so-named in honor of [Alexandre-Marie de Galois](#)) is a field that contains a finite number of elements. As with any field, a finite field is a set on which the operations of multiplication, addition, subtraction and division are defined and satisfy certain basic rules. The most common examples of finite fields are given by the integers mod p when p is a ...

The geometric approximation inherent in the mesh can lead to accuracy problems. One example of this is in thin shell analysis, which is notoriously sensitive to geometric imperfections; see Fig. 1. The sensitivity to imperfections is shown in Fig. 1b in which the buckling load of a geometrically perfect cylindrical shell is compared with shells in which geometric imperfections are introduced ...

Various concepts exist to introduce texture-related sheet anisotropy into finite element models for sheet forming. The initial material anisotropy existing before sheet deformation can be incorporated either through an anisotropic yield surface function or directly via the incorporation of crystallographic texture models into the finite element codes.

Skin pass is a fundamental step in the manufacturing of L¹/₄ders Bands-free steel sheets. An analysis of the strain heterogeneity and L¹/₄ders Bands in the skin-pass is presented, employing Finite Element Analysis (FEA) and true-stress true-strain curves displaying an initial yield stress peak higher than that observed in common tensile testing.

80% of communities are served ONLY by trucks because there are 4.1 million miles of roads but only 95,000 route miles of rail tracks. I too would like to see more rail, but all of the rail companies are privately owned, and more than any other industry they have to plow most of their profits back into maintaining their rail lines.
