• By clearly distinguish stocks & flows, this helps reduce the artifactual loops discussed with CLDs  
• Combine causal loops diagram elements with stock & flow structure  
• If complete, all loops will go through a stock  
• Loop goes into the flow of a stock (as one variable in the diagram)

Thus, wealth is a stock since it can be measured at a point of time, but income is a flow because it can be measured over a period of time. Examples of stocks are: wealth, foreign debts, loan, inventories (not change in inventories), opening stock, money supply (amount of money), population, etc.

### **Difference between Flow Variables and Stock Variables**

Information cannot flow to a stock because the stocks can't do anything with that information. In the simplest form, an information flow simply notifies an action of the concentration of a stock, the rate of flow, or the value in a converter/constant. In our example, information flows brought in the values of the growth

They argue dimensions, stocks and flows in the Appendix I. It is unfortunate that no clear vision or implication of them to economic theory is presented. This paper aims to clarify the concepts of dimensions, stocks and flows in the context of modern economics that Currie and Steedman did not try to examine in detail.

Thus stocks and flows are the basic building blocks of system dynamics models. Jay Forrester originally referred to them as "levels" (for stocks) and "rates" (for flows). A stock (or "level variable") in this broader sense is some entity that is accumulated over time by inflows and/or depleted by outflows. Stocks can only be changed via flows.

### **Stock and flow - Wikipedia**

Stock and flow diagrams distinguish between variables that are stocks and those that are flows, while CLDs do not. Because there is a fundamental difference between these kinds of variables, distinguishing between them produces an enhanced understanding of the system.
