Work hardening, also known as strain hardening, is the strengthening of a metal or polymer by plastic deformation. This strengthening occurs because of dislocation movements and dislocation generation within the crystal structure of the material. Many non-brittle metals with a reasonably high melting point as well as several polymers can be strengthened in this fashion.

### **Work hardening - Wikipedia**

Welding is a fabrication or sculptural process that joins materials, usually metals or thermoplastics, by using high heat to melt the parts together and allowing them to cool causing fusion. Welding is distinct from lower temperature metal-joining techniques such as brazing and soldering, which do not melt the base metal.. In addition to melting the base metal, a filler material is typically ...

The main 1.8t FAQ is great and all...but it isn't kept updated with all the new, great stuff people do. The user who created it won't respond to PM's and the mods won't edit it either. On the same note, we keep pointing all the new users at the FAQ as their first mode of defense. I'm creating this so we can create a supplementary FAQ. I'd also like to throw in here useful links to other 1.8t ...
